CereusReporting - Features

Archiving and SLA/Availability

- With CereusReporting you are able to generate scheduled reports and provide them to your clients either by mail or using the integrated report archive added to Cacti
  - Reduce performance impact of clients running on-demand reports themselves
  - Directly send out reports to your clients without the need to provide access to your Cacti system

- Create SLA/Availability reports for all of your devices
  - CereusReporting adds special SLA/Availability charts to your Cacti system which can be added to your reports.
  - SLA/Availability is based on failed Cacti polls (1 failed poll out of 100 = 99% availability)
  - Reports can contain date/time of failed polls, the actual chart or an overview chart of several devices.
CereusReporting supports NetFlow Reports

The FlowViewer based addon allows the generation of NetFlow reports

- Top10 Destination IP addresses allows the identification of your most used services
- Top10 Source IP addresses helps identifying virus outbrakes or optimizing server placements
- Top10 TCP Ports helps you identifying the applications using the network
Dual Column support

CereusReporting allows you to have one and two columnar layouts

- The two column layout allows you to get all your important graphs on one page.
- Easy AJAX based re-ordering of report items allows you to generate a side-by-side report for easy comparison
- Using chapters and titles, you can generate a professional enterprise grade customer report
Additional Report items

CereusReporting supports several Cacti plugins

- Weathermap support allows you the addition of weathermaps to your PDF reports
- nmidSmokePing support lets you add your Smokeping charts
- Custom DSStats charts can be added to generate Cacti based Top10 performance charts
- Execute SQL statements and generate table reports of your currently down devices
- Thold support let’s you generate a history report of threshold breaches (coming soon)
## CereusReporting Editions

### What are the differences between these versions?

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
