CereusReporting - Features

Archiving and SLA/Availability

- With CereusReporting you are able to generate scheduled reports and provide them to your clients either by mail or using the integrated report archive added to Cacti

  - Reduce performance impact of clients running on-demand reports themselves

  - Directly send out reports to your clients without the need to provide access to your Cacti system

- Create SLA/Availability reports for all of your devices

  - CereusReporting adds special SLA/Availability charts to your Cacti system which can be added to your reports.

  - SLA/Availabiltiy is based on failed Cacti polls (1 failed poll out of 100 = 99% availability)

  - Reports can contain date/time of failed polls, the actual chart or an overview chart of several devices.

CereusReporting supports NetFlow Reports

The FlowViewer based addon allows the generation of NetFlow reports
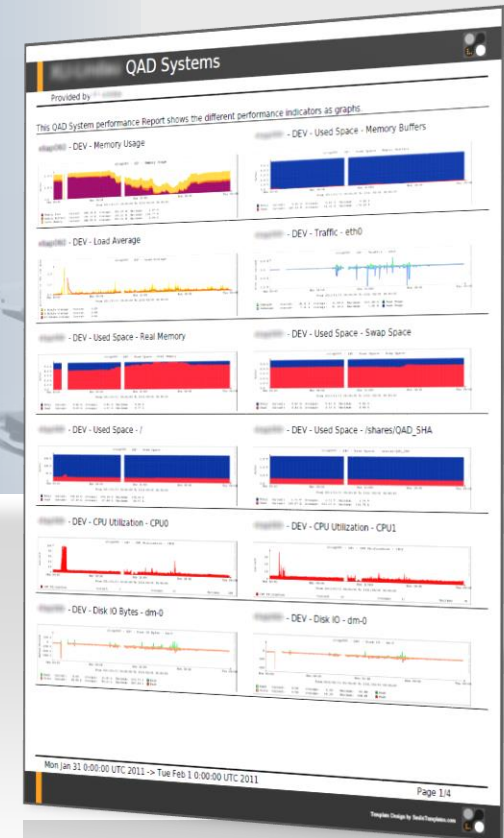

- Top10 Destination IP addresses allows the identification of your most used services

- Top10 Source IP addresses helps identifying virus outbrakes or optimizing server placements

- Top10 TCP Ports helps you identifying the applications using the network

Dual Column support

## CereusReporting allows you to have one and two columnar layouts

- The two column layout allows you to get all your important graphs on one page.

- Easy AJAX based re-ordering of report items allows you to generate a side-by-side report for easy comparison

- Using chapters and titles, you can generate a professional enterprise grade customer report

Additional Report items

CereusReporting suports several Cacti plugins

- Weathermap support allows you the addition of weathermaps to your PDF reports

- nmidSmokePing support lets you add your Smokeping charts

- Custom DSStats charts can be added to generate Cacti based Top10 performance charts

- Execute SQL statements and generate table reports of your currently down devices

- Thold support let's you generate a history report of threshold breaches (coming soon)
